Key Insights from UDISE School Analysis

- **Rural schools have smaller average size at 28 students/school vs Urban at 74 students/school. This indicates fragmented infrastructure in villages and potential teacher shortage due to multi-grade teaching.**
- **Govt ensures physical access through Primary-only schools, while Private sector fills the Secondary/Higher Secondary gap. Policy implication: Need for upgrading Govt Primary schools to include Upper Primary.**
- **School density varies significantly by state geography and population.**
- **While government schools ensure 85% rural coverage, they offer fewer grades than private schools. Also, older schools have 3x higher enrollment, showing infrastructure age correlates with community trust. This suggests policy should focus on upgrading existing govt schools rather than building new ones.**
